

d 50 to d 63 mm Ord. No. 607 063 0000

Only skilled personnel should use the device.

A black and white photograph of a hand-operated pipe cutting tool, likely a hand saw or pipe cutter. The tool features a long, dark handle with a textured grip. The head of the tool is made of metal and has a circular cutting edge with several sharp teeth. The tool is shown from a side-on perspective, highlighting its ergonomic design for manual operation.

1. Cut the pipe by applying regular and firm pressure to achieve a clean and straight cut.
2. Several lifting movements are required for cutting
Make sure that the strap successively engages into the toothed rack - tooth by tooth.
3. If the pipe cutter does not close completely, check the tension of the spring at the blade bearing.
4. To ensure proper functioning, the movable parts have to be lubricated at regular intervals.
